RE: ARCOR® S-20

**ARCOR® S-20** is suitable for use as a lining for immersion in Glycols. Although not specifically referenced in our chemical resistance chart, resistance to Glycols would be better than that listed for ethanol, propanol and butanol, all of which are rated as 'suitable for immersion' for the S-20.

**ARCOR® S-20** is a high functionality epoxy Novolac which is suitable for a wide range of caustics, acids and solvents.

A handwritten signature in black ink, appearing to read "Ken Fowler".
